

ABSTRACT

A dental floss container (20) comprises a base wall (21) and a side wall (22) extending upwardly from the periphery of the side wall (21) to define an open-topped compartment (23) for a spool of dental floss. The side wall (22) extends downwardly below the base wall (21) as a peripheral skirt (25), having a lower edge (26) of the skirt formed into a closure engagement part being a conventional snap-fit part which can snap-fit engage with the ledge of a toothpaste cap. The floss container (20) has a hinged lid (30) for the open-topped compartment (23).
